Subject: 2016 CBECC-Res software now available

Dear CBECC-Res user:

The 2016 CBECC-Res software is now available for [download from the project website](#). This version incorporates the 2016 Building Energy Efficiency Standards that were adopted on June 10, 2015.

CBECC-Res 2016.1.0 was approved on November 12, 2015 as 2016 Residential Standards Compliance Software for newly constructed low-rise residential buildings as well as for alterations and additions to existing homes. This version can be used to show compliance with the 2016 Building Energy Efficiency Standards in advance of the effective Standards date of January 1, 2017.

This software includes the following features:

- 2016 energy efficiency measures (opaque surfaces, windows, HVAC & DHW equipment)
- 2016 time dependent valuation (TDV) energy use adjustment factors
- 2016 photovoltaic (PV) credit

If you need general help with the software, please check the Quick Start Guide and User Manual, which can be downloaded from the [project website](#) and accessed by clicking on the program's Help menu. If you need additional technical assistance with the software, please email CBECC-Res Support at cbecc.res@gmail.com (if you send an .ribd file, please mention the CBECC-Res version number).

Best Regards,
